3 ways fetch will solve your package theft problem

Package theft is on the rise. The surge of online shopping has caused packages left outside apartment doors to be an easy target for porch pirates. Fetch's off-site package management provides a secure and reliable solution that benefits both community residents and property managers.

how we keep porch pirates away and solve your package problem..

In 2022, an estimated 260 million delivered packages were reported stolen. A 21% increase compared to 2021 210 million delivered packages stolen in 2021 according to SafeWise.

✓ efficient direct-to-door delivery

Fetch gives residents full control of their packages with direct-to-door scheduled delivery. Once notified through the Fetch Resident app, residents are then able to schedule their packages to be delivered at their convenience, all while being in the comfort of their home! This will provide ease and security while removing the stress of package theft from your community.

✓ reduces liability

By implementing off-site package management, property owners and managers can mitigate potential risks associated with lost or damaged packages, personal injuries, and property damage. These measures can help reduce liabilities and contribute to a safer, more efficient package management process.

✓ gain trust back

No more resident complaints regarding mishandled packages in the front office, malfunctioning package lockers or small package rooms. Gain residents' trust back by giving them the freedom to schedule and receive all deliveries on their own time through our effective delivery method.
